

Offshore Teaching Materials and Copyright

It is University policy that all third party copyright materials¹ for students who are enrolled in Murdoch University units with offshore partners will be provided via [ECMS/eReserve](#).

This policy covers the journal articles, chapters, etc that are usually compiled in unit readers, as well as any supplementary readings required during the semester.

Please be aware that the Part VB/CAL licence (under which we copy and distribute course readers and supplementary readings to internal and external students within Australia) does not cover an institution's activities that take place outside Australia.

For instance, the licence does **not** cover the provision of a single copy of a third party copyright work (in any format) to a partner who then prints or otherwise reproduces the material at the offshore site.

Such an activity contravenes the provisions of both the Australian Copyright Act and the CAL licence; it may render Murdoch University liable for the authorisation of an infringing activity under Australian legislation and, possibly, that of the partner country.

Licensed teaching materials

Attention should also be paid to course materials that are used by the University under other licences or contracts: these may not cover the use of the materials in another jurisdiction. The terms of any contract or licence should be confirmed before providing such materials to students offshore.

'© Murdoch University'

Works created by University staff in the course of their employment (e.g. a unit guide) are not subject to the above provisions, and may be sent in any convenient format to the partner for reproduction at the offshore site.

*For further information on this or other copyright matters please contact the
Copyright Coordinator, Kate Makowiecka, on 9360 7491 or at copyright@murdoch.edu.au*

¹ "Third party unauthorised copyright materials" are those copied under MU's licence with the Copyright Agency Ltd (CAL): they constitute most of the material used as course readings – journal articles, book chapters, images, graphs, etc.
