How to connect to Gateway using SSH on a Mac

1. Click on **Macintosh HD** on your desktop
2. Open **Applications**
3. Open the **Utilities** folder
4. Click on **Terminal**
5. Type `ssh studentnumber@gateway.murdoch.edu.au`.
   
   Eg: ssh 12345678@gateway.murdoch.edu.au

6. A black window will open. The first time you connect to the gateway you will get the following message:

   “The authenticity of host 'gateway.murdoch.edu.au (134.115.4.4)' can't be established.

   Type ‘Yes’

7. The gateway login screen will now appear and you will need to type in your password.

   ![Gateway Login Screen]

   When you type in your password, the cursor will flash but NOT move and it will look like you are not typing anything. After you have typed your password, press the enter key.
8. If you have entered your password correctly you will get the 'Welcome to gateway' message and how long you have been logged in.

9. You must leave the window open (you can minimize the window) whilst you are connected to the external internet.

10. When you wish to disconnect your Gateway session, maximise the window and press ‘enter’.
